SKILLS ASSESSMENT CHECKLIST - Ropes course

The PACI high ropes course is intended to impart practical skills and knowledge to enable a person to conduct high ropes sessions within an established OH&S framework. Training must be conducted as outlined in this document.

Training plan

Nominal duration = 36 hours (4 days) – consists of a combination of theory and practice
Maximum trainees = 8
Recognition: Successful trainees will receive a nationally recognised statement of attainment + photo ID card

Overview of training:
• OHS legislation and Australian standards in relation to working at height
  - Qld WH&S Act and Regulation (when working within the State of Qld)
  - AS 1891.4
• Hazard identification
• Briefings (content & appropriateness to client group)
• Belay systems
• Safety calls
• Selecting and checking equipment for faults/defects
• Supervising low ropes activities
• Supervising high ropes activities
• Using double lanyards (‘lobster claws’)
• Abseiling skills
• Ladder climbing skills
• Rescue procedures

LEARNING AND ASSESSMENT STRATEGY:

</tbody>
</table>

Trainer competency:

1. Trainers will be qualified to Certificate IV Workplace Training & Assessment (or equivalent); and
2. Trainers will have competency at least to the level being assessed.
CONTEXT FOR TRAINING AND ASSESSMENT

All training and assessment must occur within a context that is relevant and realistic for the trainees.

For the purposes of this course, the context is artificial climbing walls.

Training must consist of a combination of theory AND practical training activities – courses that consist only of pure theory based instruction are not permitted.

An accurate determination of the trainee’s needs must be made and then training is adjusted (ie tuned) to meet those needs.
Typical sequence of training: (schedule may vary; dependant on individual learning ability)

Day 1 (07:45 - 17:30)

[ ] Theory
- Welcome and intros
- Course objectives
- Responsibilities and duties of a ropes course leader
- Course timetable
- OHS obligations (contextualise to each State/Territory)
  - Indoor climbing wall is a workplace
- Court case example
  (refer to ‘4 in 1 fitness centre’ prosecution in NSW – Jade Frances case in 1996)
- The Jade Frances case has set a precedent in NSW regarding appropriate method of attaching participants to a rope – that is – both a locking carabiner AND tying the rope directly to the harness (as outdoor lead climbers do).
- Clipping in with a single locking carabiner is an unacceptable method
- Belay techniques
  - Numerous near misses with poor belaying techniques
  - Greatest risk exists during lowering (not while climbing up)
  - Auto/self locking belay devices are recommended but not 100% foolproof
  - All participants must be instructed in the proper use of the facilities belay system
  - The instructor must assess the competence of the participant in belaying
  - Ongoing supervision is important, particularly with young children
- Children under the age of 12 should not be permitted to operate the belay systems unsupervised
- During organised school activities, PACI advocates a double belay person technique – one person is the ‘primary’ belayer and the other person is the backup belayer. The backup belayer simply holds the rope with both hands and remain constantly alert and attentive.

[ ] Practical
- Briefings (content and structure)
  - The briefing will impart important safety instructions to participants
- Belay procedures
- Safety calls
- Emergency response - types of situations that could occur
  - ‘Frozen’ climber
  - Rapid or out-of-control descent (while lowering)
  - Panicking climber – fear of falling off or letting go to be lowered
  - Stuck or jammed belay system
  - Pendulum/swinging falls (avoid climbing diagonally)
[ ] Theory
- welcome and intros
- course objectives
- course training plan / timetable
- WH&S obligations
- responsibilities of a ropes course leader
- equipment (selection, use & maintenance)
- assessing and controlling risks

[ ] Practical
- fitting & adjusting personal equipment
- checking equipment to ensure fitness for use
- using portable ladder to access high ropes elements
- using a double lanyard (aka 'lobster claws')
- safety calls
- mobility across elements at height
- abseiling skills

DAY 2 (08:00 - 17:00)

[ ] Theory
[ ] Practical
- rescue skills
- development of personal skills
- conducting low ropes activities (role-plays)
- conducting high ropes activities (role-plays)

DAY 3 (08:00 - 17:00)

[ ] Theory
[ ] Practical
- development of personal skills
- recap of rescue skills
- conducting high ropes activities (role-plays)

DAY 4 (08:00 - 17:00)

[ ] Theory
[ ] Practical
- appraisal and recommendations for improvement
- recap of key skills
- debrief, then briefing for final assessment
Final assessment

Each person will be assessed. To achieve competency, a person must:

1. Deliver an adequate briefing

2. Demonstrate skills - eg belay technique, mobility at height, safety calls and their application

3. Check equipment to ensure fitness for use - (check belay systems and ropes to ensure correct function, and free of damage)

4. Conduct a high ropes activity (to be role played within a class simulation)
   4.1 Distribute & fit equipment
   4.2 Intervene where necessary to maintain safety
   4.3 Correct faults and offer suggestions to improve participant enjoyment
   4.4 Answer questions from participants

5. Respond to emergencies
   5.1 frozen or stuck participant
   5.2 stuck or jammed belay system

6. Debrief of the activity

Course administration
- sign paperwork
- passport photos
- obtain course feedback

Each person will be assessed. To achieve competency, a person must:

1. Deliver an adequate participant briefing
2. Ability to demonstrate skills - eg belay technique, climbing techniques, safety calls and their application
3. Check equipment to ensure fitness for use - (check belay systems and ropes to ensure function, and free of damage)
4. Conduct a climbing activity (to be role played within a realistic class simulation)
   4.1 Intervene where necessary to maintain safety
   4.2 Ensure sufficient time for enjoyment of the activity
   4.3 Correct faults and offer suggestions to improve participant enjoyment
   4.4 Answer questions from participants
   4.5 Conduct activity within agreed time limits (use time taken as feedback)
5. Respond to emergencies
   5.1 frozen or stuck climber
   5.2 stuck or jammed belay system
   5.3 pendulum/swinging falls – potentially serious situation
6. Debrief of the activity

[ ] Course administration
- sign paperwork
- passport photos
- obtain course feedback

Note:
Successful trainees will receive a statement of attainment & photo ID card.
# UNITS OF COMPETENCY

The following list represents the complete cluster of units that define a PACI ropes course leader. Note: Not valid on natural cliffs, or artificial climbing surfaces.

Details of units are at [www.ntis.gov.au](http://www.ntis.gov.au)

## ASSESSMENT CHECKLIST

Note: A tick placed in each box indicates that competency has been achieved.

### 1.0 Logistics & Environment

Units: SROODR001A & SROOPS001B

These criteria must be assessed prior to any belaying, climbing and abseiling.
