

ANTI BOWLINES

Just like the world of sub-atomic physics where every particle has an 'anti' particle; it is theorized that all 'Bowlines' also have an 'anti' version. Some concepts are presented here.

Simple (#1010) Bowline Z twist / R-hand nipping loop

In the anti-Bowline, the tail feeds through the nipping loop from the **opposite direction** relative to the simple (#1010) Bowline. Furthermore, the collar is formed around the **outgoing eye-leg** instead of the Spart.

NOTE: The anti #1010 Bowline can take 4 different forms.

Five different anti Bowlines are presented here...

#1010 Simple Bowline

Anti #1010 Bowline

Yosemite Bowline

Anti Yosemite Bowline

EBSB Bowline

Anti EBSB Bowline

#1080 Bowline on-a-bight
